

# Dev server cleanup process

- last modification date - if since that date there were no modifications (publish), and passed 2 weeks, developer will get a notice that it is going to be deleted and we will archive it, without the extract  
{Vered to write the query}
- After another week we will remove the extract from the scheduler and archive the workbook (unless we get a request from the developer to keep it, and then it will be checked for modifications in two weeks since his request)  
{Developer to republish workbook with “exceptional” tag, and we will skip those in the clearance}
- check extracts that run in dev in the schedule, and how we stop unnecessary extract refresh  
{Omer to Investigate how to cancel scheduling on a workbook}
- Check usage of users that are not BI?

Uriel - block the option to add dev links to inbrain.
